LinkedIn, GitHub: ThejasAG, Portfolio

Final-year B.E. (AI & ML) student and Software Development Intern at Xorstack, where I test the Vya Consumer and Business apps and built an internal iOS test automation platform with FastAPI, React and Appium. Also built a Flask + React food delivery app with JWT authentication and a voice-based AI medical assistant.

Technical Skills

- **Languages**: Python, JavaScript, TypeScript, C, C++
- **Backend**: FastAPI, Flask, SQLAlchemy, Alembic, REST APIs, JWT; Node.js, Express.js
- **Frontend & Data**: React.js (Vite), Leaflet; scikit-learn, Pandas, NumPy, NLTK
- **Testing**: Manual, regression and real-device testing; API validation; Appium, XCUITest
- **Databases & Tools**: MySQL, MongoDB, SQLite; Git, GitHub, Docker, Google Cloud Platform

Experience

- **Xorstack** **Bengaluru, India (on-site)**
  Software Development Intern *Ongoing*
  - Built and maintain an internal iOS test automation platform: FastAPI backend (SQLAlchemy, Alembic), React dashboard, and execution agents driving real iPhones and simulators through Appium/XCUITest
  - Impact-based test selection: maps a change's files through a dependency graph to affected modules and runs only the tests covering them; untagged tests always run
  - Reliability fixes, reproducing each bug first: runs now report what devices actually did, the schema rebuilds from Alembic migrations alone, and a GitHub webhook push creates exactly one run
  - Manual, regression and real-device testing of the Vya Consumer and Business apps; validated invoices and VAT across rates and traced a mismatch to a per-unit value rounded a step too early

Projects

- **Food Delivery Application** **github.com/ThejasAG/food_delivery**
  Flask, MySQL, JWT, React, Leaflet
  - Flask API with SQLAlchemy and Flask-Migrate on MySQL; JWT authentication with bcrypt-hashed passwords
  - Also built a separate MERN version (MongoDB, Express.js, React, Node.js) with REST APIs, authentication and order features
- **AI Medical Assistant: Voice-Based Healthcare Bot** **github.com/ThejasAG/MedicalVoice-BOT**
  FastAPI, scikit-learn, React
  - FastAPI backend classifying symptoms with TF-IDF + Logistic Regression (scikit-learn, NLTK, pandas); a medical filter refuses off-topic questions
  - Multilingual speech-to-text, translation layer and offline text-to-speech; React dashboard; multi-threaded voice and UI processing

Education

- **Dr. Ambedkar Institute of Technology** **Bengaluru**
  B.E. in Artificial Intelligence & Machine Learning (expected Jul 2027), CGPA: 6.83 *2023 - 2027*
- Class XII (PCMB), BGS PU College: 79.67% | Class X, Bhoruka English School: 76%

Certifications & Languages

- Supervised Machine Learning: Regression and Classification, DeepLearning.AI (Coursera); Python Data Structures, University of Michigan (Coursera); Google Cloud Technical Series; Real-World ML Projects (on-campus)
- English (fluent), Kannada (native), Hindi (conversational)
